

## Course report Faculty of Technology and Society

This course report is based on student feedback and submitted course evaluations, exam results and the teacher's idea for further development. The course report is published on the course website and Canvas-site.

<b>Course name</b>	Distributed Intelligent Systems
<b>Course code</b>	DA382A
<b>Semester</b>	Vt24
<b>Number of registered students</b>	35
<b>Course coordinator</b>	Gion Koch Svedberg

	Course report is published on Canvas-site
<b>x</b>	Course report is published on course webpage

### Compulsory course evaluation

Number of responses to the compulsory course evaluation	3
---	---

The compulsory course evaluation has been conducted through:

	Standard template via Reflex
	Extended standard template with <i>own questions</i> via Reflex
	Own evaluation method by the course coordinator
If own evaluation method was conducted, describe how:	

### Additional evaluations that were conducted during the course

	Separate survey
	Oral evaluation in class
	Oral evaluation in smaller groups
	Other evaluation method
If other evaluation method was conducted, describe how:	

### Comments on the course evaluations

If the three students who answered can be seen as representative for the rest of the class, the evaluation would be very positive. Especially gratifying is the high extend of learning outcomes achieved and that the course's form of assessment
--

to a very high degree gave the students the opportunity to show how well they achieved the learning outcomes.

To give up on the idea of 'flipped classroom' seemed to work, compared to last year's evaluation.

### **Examination results**

X	Examination results are as expected
	Examination results are not as expected
<p>After the first retake, about 60% of the active students passed the course. What is different this year, is that more than 30% of the students did not turn in any of the 7 home assignments to the ordinary or to the first retake examination.</p>	

### **Recommendations and priorities for the course development**

The integration of the large distributed intelligent agent projects needs to be improved, as was also mentioned in one of the evaluation comments. Breaking up the project in smaller parts and making the common software integration mandatory are two suggestions that we will investigate.
