

Kursrapport

Course report

Course name	Data Analysis and Visualization
Course code	ME659E
Semester	HT21
Number of students registered	15
Course responsible	Óscar Coromina Rodriguez

<input type="checkbox"/>	Course report is published on Canvas-site
<input type="checkbox"/>	Course report is published on course webpage

Course evaluation

Number of answers on obligatory course evaluation	2
---	---

Obligatory course evaluation has been done through:

<input checked="" type="checkbox"/>	Simplest standard template via SSR (Sunet Survey and Report)
<input type="checkbox"/>	Standard template with added questions via SSR
<input type="checkbox"/>	Own way of evaluation by course responsible

Any further evaluations during the course:

<input type="checkbox"/>	Separate survey
<input type="checkbox"/>	Oral in class
<input type="checkbox"/>	Oral in smaller groups
<input checked="" type="checkbox"/>	Other way
In addition to the standard survey we allowed the students to leave their feedback in a shared document. Three students left comments in this document.	

Comments to student course evaluations

Overall the students evaluate positively the course, its content, structure, readings and assignments. One of the aspects that the students highlight as particularly positive were the data sprints we hand by the end of the course. There is a consensus as well in the fact that the content and learning outcomes were aligned and helped the students in increasing their skills and knowledge. There is also a shared comment regarding on of the mandatory readings that the student believe was specially challenging.

Examination result

X	Examination result is like expected
	Examination result is not like expected
The examination results were as expected and reflect how the students have learned through the course.	

Recommendations and priorities for course evaluation

- Improve the feedback mechanism to obtain more participants.
- The data sprints were instrumental in allowing the students to acquire skills and competences in data analysis and visualization. Rescheduling the data sprints earlier could help in having better projects and assignments.

Instructions and instructions

This part of the course report is only intended as support for the course coordinator to create the course report and the pages are removed before publication.

Course name is the complete course name that the course has in the syllabus. For example Computer Science: Research Methodology or Introduction to Programming and Embedded Systems

Course code is the code with which the course is identified, for example DA350A or MT158A.

The semester is the semester / course opportunity that the course report refers to, for example Spring 20 or Autumn 19.

Number of registered is the number of registered students on the course three weeks after the start of the course (ie number of registered after early interruptions).

Course coordinator is the name of the teacher who is the course coordinator and who is responsible for writing the course report. Other teachers may,

however, have been involved in the course implementation and compilation of the course report. Other teachers' names are not given.

The fields above are filled in by the study administration if course evaluation is done via SSR under the auspices of the study administration.

It must be registered in the course report if it is published on the course website and the Canvas page of the current course opportunity. This is filled in by the person responsible for the publication.

Course evaluation

The number of responses to compulsory course evaluation is the number who submitted a course evaluation or otherwise actively participated if an alternative method was used in-house (to be filled in by the study administration if course evaluation is done via SSR under the auspices of the study administration).

Mandatory price valuation has taken place by reporting which approach has been used for the price valuation. Methods are indicated by checking the current option. There are three options of which only one should be ticked:

- Only standard template via SSR (SUNET Survey and Report): This is what the study administration organizes unless otherwise stated to the study administration for the course. Check this option if you used the standard template via the study administration without making any adjustments.
- Standard template extended with own questions via SSR: Check this option if you have extended the standard template that the study administration organizes with its own course-specific questions. Added questions do not need to be reported here. They are archived with the course evaluation itself.
- Under your own auspices by the course coordinator: Check this alternative if the course evaluation has not been carried out with one of the two alternatives above. The course evaluation has then been organized by the course coordinator outside the study administration. The course coordinator is then also responsible for compiling the course evaluation. If the course coordinator has organized a course evaluation in-house, the approach must be described briefly. Specific questions do not need to be reported here, but are reported via the summary the course coordinator then makes of the course evaluation. For example, course evaluation has been conducted anonymously on paper in connection with presentations at the end of the course or course evaluation has been conducted anonymously with Mentimeter in connection with lecture week 22.

If additional valuations have been made, these are described as follows. It is not necessary to carry out additional valuations. If this has not happened, the fields below are left blank.

Comments on course evaluations mean that the course coordinator must comment on the results of the course evaluations. The comments are aimed at current and future students on the course. It is therefore not necessary to explain in the comments what different course elements mean or the like. The reader can be expected to have knowledge of the course's structure and structure. Relevant things to address here are, for example, commenting on whether there is any result in the price evaluation that was not expected or whether there is any common criticism or results that may need to be explained or put in context.

Examination results

Examination results refer to results from all forms of examination that have taken place on the course (examination, laboratory work, assignments, etc.). Indicate whether the examination result overall was as expected or not. If there are separate examination parts that differed greatly in how they turned out in relation to the expected result (for example, the expected number of passers on a written exam but a very low number of passers on an assignment), then both alternatives can be checked.

If the alternative is that the examination result deviates from what was expected, this deviation is commented on and what any reasons for the deviation may consist of. Comment can be given even if the examination result looks as expected, but there is some aspect that needs to be highlighted.

Recommendations and priorities for course development

Briefly state which recommendations and priorities should be made for the upcoming course opportunity based on the results of course evaluations and in relation to examination results.
